

## NEUROLOGICAL DISORDERS

### STEM CELL SUPPORT

Neurological disorders cause inflammation and imbalances in the nervous system. Mesenchymal stem cells are being studied for their ability to support the body's repair and regulation.

### SCIENTIFIC DATA

Mesenchymal stem cells do not directly replace neurons; instead, they support the nervous system through cell signaling mechanisms.

### BENEFITS OF STEM CELL THERAPY

- **Modulates neuroinflammation:** Reduces chronic inflammatory processes within nerve tissue.
- **Promotes cell signaling:** Activates the communication necessary for natural repair mechanisms.
- **Regulates the immune system:** Stabilizes defenses directly linked to neurological symptoms.
- **Mitigates cellular stress:** Protects the nervous system environment from adverse biological factors.
